Project Governance & Advisory

The security of an Odoo project governed with method, quality, and vision.

Rapsodoo supports your company throughout every phase of the Odoo implementation, ensuring control, quality, and a truly guided project journey.

RAPSODOO

Why choose our
GOVERNANCE & ADVISORY

Implementing Odoo is a strategic project that impacts processes, people, and ways of working. Without clear governance, however, there is a real risk of losing control over timelines, budget, and software quality.
This is where our **Odoo Project Governance & Advisory** offering comes in: a consulting service that guides the client through the entire project lifecycle, ensuring every activity is managed with structure and vision.

Rapsodoo operates as an **independent advisor**, protecting the company's interests and ensuring that the implementation partner complies with quality standards, milestones, and functional requirements.
Our role is to provide structure, coordination, and technical expertise so the project evolves in an orderly manner and in line with initial expectations.

A properly governed project results in higher release quality, reduced risks, faster internal adoption, and more efficient use of the Odoo standard.
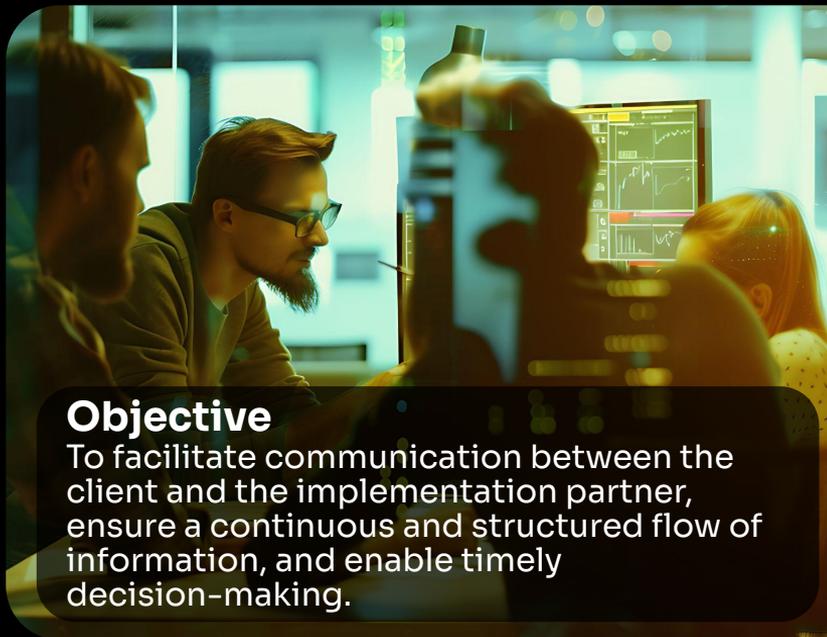

Our
AREAS OF INTERVENTION

RAPSODOO

Project Management & Project Governance

Rapsodoo coordinates the Odoo project using a rigorous and transparent approach. We monitor activity progress, analyze risks and critical issues, and regularly verify alignment with timelines and budget.

Project governance includes the management of Steering Committees, preparation of progress reports (SAL), definition of responsibilities (RACI), and control of planned activity execution.

Objective
To facilitate communication between the client and the implementation partner, ensure a continuous and structured flow of information, and enable timely decision-making.

RAPSODOO

Functional Architecture & Business Blueprint

An accurate analysis phase is essential to build a solid Odoo project. Our team supports As-Is process mapping and the definition of To-Be workflows, including requirement gathering through interviews with key users.
We validate the functional analyses shared by the partner, assess potential gaps, and propose solutions that prioritize standard Odoo adoption, limit unnecessary customizations, and reduce technical debt.

Objective
To create a clear, shared functional foundation fully aligned with the company's operational reality.
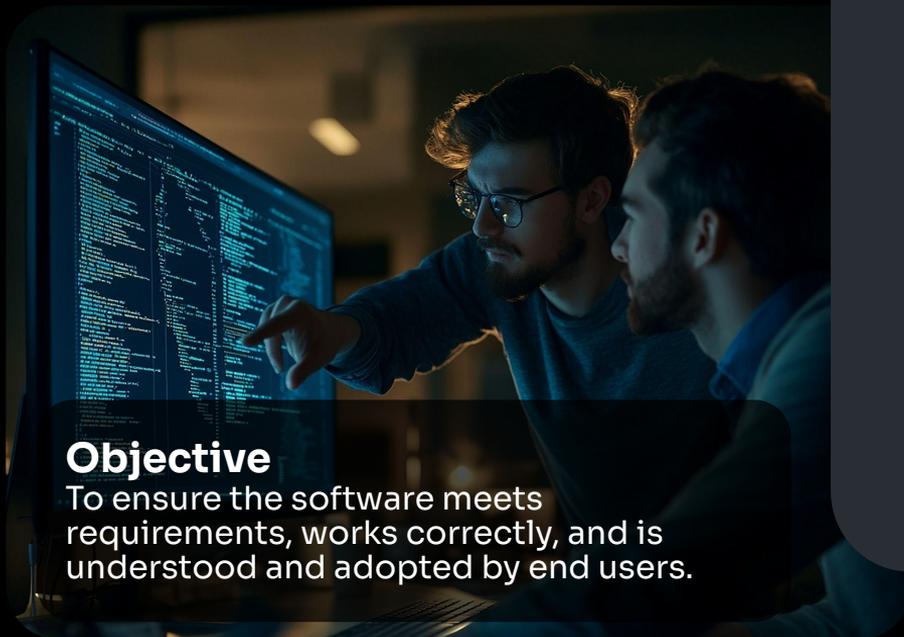

RAPSODOO

Quality Assurance & Change Management

We support the company in managing software quality and internal adoption. We plan and coordinate the UAT phase, prepare the Test Book, and verify the correct resolution of issues in collaboration with the implementation partner.

During the go-live and hypercare phases, we monitor system performance and support users and departments to ensure a smooth transition with no operational disruptions.

Objective
To ensure the software meets requirements, works correctly, and is understood and adopted by end users.

Our
WORKING METHOD

Working method

RAPSODOO

1 **Project Charter & Scope Definition**

We define project scope, roles, responsibilities, and measurable objectives. This phase ensures all stakeholders share a common and structured vision.

2 **Business Blueprint & Process Mapping**

We document business processes, analyze requirements, and identify any gaps between operational needs and standard Odoo functionalities. The result is a complete and validated blueprint.

3 **Technical Validation & Development**

We review technical specifications and monitor development progress, focusing on quality, avoiding unnecessary customizations, and promoting scalable solutions.

4 **UAT – User Acceptance Test**

We plan and coordinate the testing phase, verify correct functionality implementation, and support users during process validation.

5 **Training & Documentation**

We assist in creating operational documentation and collaborate with the team to ensure effective training for key users.

**6** **Go-Live & Hypercare**

We support the client during go-live, monitor critical issues and performance, and provide intensive support in the following weeks to ensure a safe and orderly transition.

The benefits of
RAPSODOO GOVERNANCE

A properly governed Odoo project delivers **concrete and measurable benefits:**
